

Disaster Response: How Geographical Information System (GIS) Technology Can Enhance Operations

The program will provide the Chief Officer, Emergency Manager, and other key officials with an understanding of how geographical information system (GIS) technology can enhance operations before, during, and after the response. The program will include an overview of how GIS technology was leveraged during the response to Hurricane Dorian, including how real-time geospatial intelligence was integrated into the South Carolina Emergency Management Division's "Palmetto" software. The audience will leave with a greater understanding of GIS and how it can enhance the disaster response operations for their organization.
